United Feeds Swine Feeding Trial Results

Average Daily Gain pounds/day

Feeding Study conducted at United Feeds Research Nursery, Sheridan, IN, Jan - Mar, 1995.

Data: 630 weanling pigs fed prestarter / starter for 12 days then on trial 28 days

21 pigs/pen - weighed as a group

Six replications

Raw data from United Feeds Test Reports Nos. UFN 19503, 39508 & 59509

This work is described in Paper #248 at the 87th Annual Meeting of ASAS, July 25 - 28, 1995. In that paper the ADG data was adjusted to include starting trial weight as a covariate. The following reflects the adjusted results and also shows that TBCC performs as well at 150 ppm Cu as does

Average Daily Gain pounds/day
